

Goose Creek Sub-Catchment Discharge Elimination in the Town of Southold

PEP is allocating \$98,000 of BIL Funds for the Town of Southold Stormwater Outfall Elimination Project and discharge removal plan in the sub-catchment boundary of Goose Creek, Southold.

Background

Goose Creek, located in Southold, is struggling with the effects of Stormwater runoff due to infrastructure developed without stormwater pollution in mind.

NYSDEC identifies Goose Creek as an impaired waterbody, in compliance with the Clean Water Act

The Goose Creek Subwatershed is approximately 569 acres, 15 % of which (86 acres) are impermeable.

The problem with stormwater runoff

During any precipitation event water flows over impervious surfaces and into bodies of water. This stormwater runoff picks up pollution along its path like trash, chemicals, oils, dirt, and sediment that can harm our water bodies.

Goose Creek Sub-catchment Discharge Elimination in the Town of Southold

- Eliminate direct stormwater discharge into Goose Creek
- Update stormwater management practices
- Update outdated infrastructure
- Continually monitor water quality
- Revitalize Goose Creeks ecosystem
- Education about stormwater

Status

7 major outfalls have been identified as sources of pollution in need of remediation.

PEP is funding the 3 of 7 elimination sites.

The outfalls will be permanently shut down by cementing with brick and concrete, completely removing it, or replacing it with a subsurface infiltration chamber, where water flows through a pretreatment system before being discharged back into the watershed.

To complement these efforts, educational activities on the impacts of stormwater discharge and the actions people can take to prevent polluted runoff will be implemented.

\$98,000 of PEP BIL funds has been secured

Partners

Town of Southold
Goose Creek Civic Association
North Fork Environmental

CCMP Actions:

ACTION 14: Increased public awareness of the anticipated impacts of Climate Change in the Peconic Estuary and practical ways to mitigate and prepare for them.

ACTION 21: Expand non-point source subwatershed management plans to all pathogen-impaired waterbodies and continue to use existing plans.
